

Checklist for employers – engaging workers after psychological injury

Knowing what to do when someone at work has experienced a psychological injury can be difficult and confronting for Employers. This resource has been developed to be a practical tool for Employers to engage and support workers who have experienced a psychological injury within the workplace. Independently reviewed by Griffith University the Checklist includes evidence based strategies and techniques to increase the likelihood for a successful recovery and return to work.

The tick boxes allow you to keep track of progress and engagement week to week and the free text section allows you to personalise and tailor your intervention to the unique needs of your worker and the workplace.

Social connections are critical and integral to a person's individual overall health and wellbeing as well as being beneficial to society. They can also have a positive effect on recovery from injury and illness and return to work rates.

Human beings are a deeply social species, social connectedness is the experience of belonging and relatedness between people and refers to relationships with others. It is a measure of how people interact together. For individuals, it involves both connections with others within an extended family or social circle, and beyond that circle to wider communities such as the workplace, a geographic community or a community of interest.

Recent research by icare has revealed that regular, authentic, caring and open communication with injured workers, a belief that the organisation can be trusted and that strong supportive relationships exist in the work community, can all significantly improve return to work rates.

Connect - Make sure you contact your worker within the first 48 hours

Contact the worker, inquire about their wellbeing and demonstrate genuine concern. Do not use this as an opportunity to dispute the injury or to gather facts. This contact should purely be focused on your workers wellbeing and wishing them a safe and speedy recovery and return to work. Positive contact within the first 48 hours has significant improvements in return to work outcomes.

Buy, N., Wagner, S., Randall, C., Yu, I., Geisen, T., Harder, H., ... & Howe, C. (2016). Australian employee perspectives on disability management in relation to job satisfaction, physical and mental health, workplace morale and reduced sickness absence. *International Journal of Disability Management*, 11, 1-8

Contact within 48 hours

Notes

Connect - Set up a buddy system

Identify, or ask your worker to identify a person in the workplace they trust or have a positive relationship with. Make regular times for this buddy and the worker to catch up for coffee. Keeping your worker positively engaged with their colleagues increases their wellbeing and helps with faster recovery and return to work outcomes. The buddy should focus on how the worker is feeling about their experience, what really matters to them and what questions they need answered.

Notes

Connect - Schedule regular contacts

Staying in regular contact with your worker allows for greater engagement throughout the recovery process. It also keeps return to work at the forefront of that person's mind. If a worker feels like an important, valued member of the team they are more likely to want to return to work.

These conversations should be strengths based – start conversations about what the worker likes and what they enjoy most in their job. It's also a chance to introduce “have you thought about....” if there's a sense that alternate duties may be potentially required.

Scheduled contact:

Week

1 2 3 4 5 6 7 8 9 10 11 12

Notes

Engage - Encourage them to attend social events at work

If there are any scheduled birthday parties, anniversary's, celebratory events at work, invite your worker. Having them engage positively with existing staff means they still consider themselves as part of the team. It also demonstrates to remaining employees that you genuinely care about your staff, bolstering morale and decreasing the likelihood of cascading claims effect.

Notes

Engage - Encourage positive self-care outside of work

Support your worker to engage in activities what will improve their mood, community engagement and wellness outside of the office such as having a good diet, doing exercise, volunteering and continuing with social commitments. Workers who feel supported holistically have greater return to work outcomes.

Moore, J. E., Von Korff, M., Cherkin, D., Saunders, K., & Lorig, K. (2000). A randomized trial of a cognitive-behavioral program for enhancing back pain self care in a primary care setting. , 145-153.

Follow up each week to ensure they are continuing to look after themselves:

Week

1 2 3 4 5 6 7 8 9 10 11 12

Notes

Engage - Recognise and celebrate milestones

Celebrate the small wins in recovery along the way to return to work. If your worker has achieved an upgraded certification or has completed a course, take the time to congratulate them on their efforts.

O'Neill, J., Mamun, A. A., Potamites, E., Chan, F., & da Silva Cordoso, E. (2015). Return to work of disability insurance beneficiaries who do and do not access state vocational rehabilitation agency services. *Journal of Disability Policy Studies*, 26, 111-123.

Notes

Support - Ensure payments continue

Ensure the worker continues to receive any repayments or salary while they are recovering. Workers who are financially stressed have poorer return to work outcomes. When a worker is worried about finances they also feel undervalued, forgotten or mistreated by their employer.^{vi}

Conversation with HR/Payroll

Maceachen, E., Kosny, A., & Ferrier, S., & Chambers, L. (2010). the “toxic dose” of system problems: why some injured workers don’t return to work as expected. *Journal of Occupational Rehabilitation*, 20, 344-366

Notes

Support - Consider meaningful suitable duties

Where your worker has some capacity for work, make all efforts to find meaningful work for them in the workplace. Workers who can utilise their skills vocationally during recovery report reduced pain and greater return to work outcomes.

Norlund, S., Fjellman-Wiklund, A., Nordin, M., Stenlund, T., & Ahlgren, C. (2013). Personal resources and support when regaining the ability to work: An interview study with exhaustion disorder patients. *Journal of Occupational Rehabilitation*, 23, 270-279

Notes

Support - Come from a place of belief/support

Psychological injury claims are less tangible than other injuries and can be difficult to accept. When interacting with your worker, leave the investigation up to the insurer. Let your interaction with the worker come from a place of belief and support. Demonstrating empathy and belief does not mean you accept responsibility for the injury/claim, rather that you accept that this person needs support to return to pre-injury duties.
