

icare Lung Screen

The mobile health monitoring service that comes to your workplace

Detection made earlier and easier

Lung screening is quick and painless with most consultations taking just 25 to 30 minutes, meaning we can screen up to 40 people in a day. Employers can choose between three options depending on location and size of their workforce.

Option 1

The employer books the icare Lung Screen mobile service for a very affordable subsidised rate, to screen for hazardous dust exposure (minimum of 30 workers per booking). icare Lung Screen mobile service (Lung Bus) drives to your suburb or workplace, minimising lost time and productivity.

Option 2

Metropolitan employers can book to check individuals for pre and post exposure to hazardous dust at the Dust Diseases Care Health Screening Clinic at 321 Kent St, Sydney (close to public transport). Screening costs are subsidised and very affordable. There is no minimum number of workers that need to be screened. Booking is essential.

Option 3

Regional employers can have lung screening performed locally. To facilitate the service, icare Dust Diseases Care provides the guidelines, templates, review reports and record maintenance for a very affordable, subsidised rate. Again, there is no minimum number of workers that need to be screened.

A simple 3 step assessment process

Approximately 30 minutes per employee.

Step one

Chest X-ray

Step two

Lung function test

Step three

Respiratory medical examination

Initiatives that work

icare Dust Diseases Care is committed to the welfare of workers and the community, providing compensation, personalised care and support to sufferers of work-related dust diseases. For more information, visit www.icare.nsw.gov.au.

The icare Lung Screen mobile service (Lung Bus) brings support closer to where employers and workers need it most, including regional NSW areas like Albury, Tweed Heads, Broken Hill, Orange and beyond.

icare Dust Diseases Care also provides research and community grants to fund a range of programs to improve outcomes for all with a dust disease. For more information on icare Dust Diseases Care visit www.icare.nsw.gov.au

Compliance for employers

icare makes it easier for NSW employers to comply with the Work Health and Safety Regulation 2017. We provide health monitoring for each employee exposed to asbestos, crystalline silica and other hazardous substances.

Simpler for workers

icare ensures minimal time off work by providing lung screening at the workplace. Health monitoring records are stored securely and are readily available in the future.

How to book

Bookings can be made by calling [1800 550 027](tel:1800550027) or by emailing: lungscreen@icare.nsw.gov.au

Making lung screening more accessible

Employers have a responsibility to provide health monitoring for workers exposed to hazardous dust in the workplace.

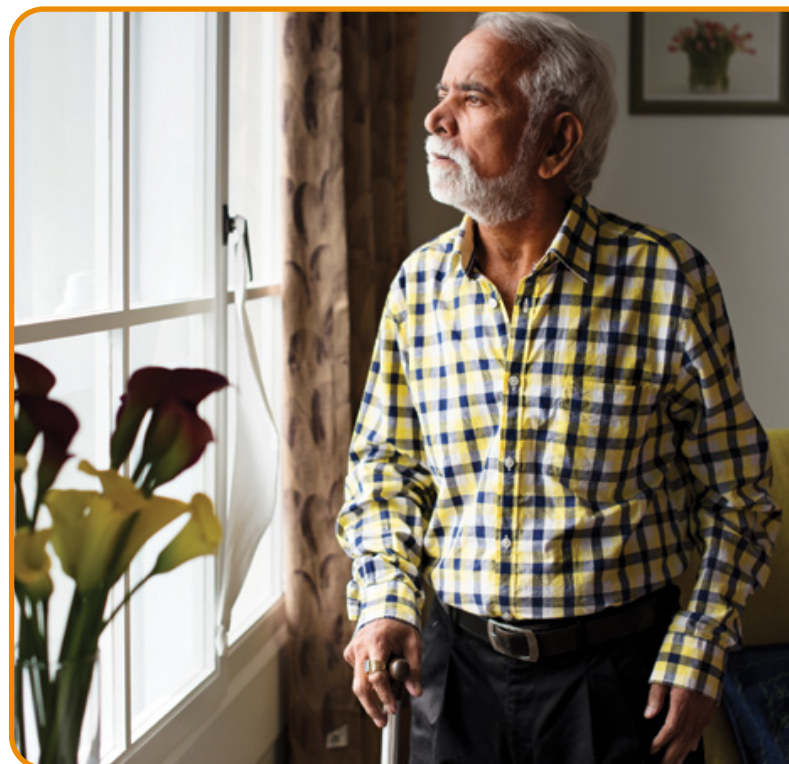

icare Lung Screen, a mobile respiratory testing service, is just another way icare can support employers by visiting their worksite or premises. Onboard there is an X-ray room, advanced lung function testing equipment and a medical practitioner to conduct the examination. This minimises any disruption to the workday and saves in travel time for workers.

Each examination comprises of:

- a chest X-ray
- a lung function (spirometry) test
- a respiratory medical examination

Results are analysed by an icare Dust Diseases Care respiratory physician, who may recommend follow up examination where applicable.

The follow up, such as CT scanning, is free if investigating a dust disease. A health monitoring report is provided to each worker and the employer receives a summary of results.
